Calgary, Alberta, Canada

SKILLS

- **Computer Science**
 - **Flutter/Dart:** Used to create cross-platform apps for Android, Linux, .etc
 - **Python:** Used to develop 16 projects involving various APIs, packages, and frameworks; currently exploring Django
 - **Git/GitHub:** Used to version-control and document personal projects; maintain and host personal website
- **Information Systems/Technology**
 - **Docker:** used both for testing and shipping self-made projects, and deploying apps on server environments
 - **Linux:** used in both server and PC environments; daily-driving Fedora KDE

PROJECTS

- **Computer Science**
 - **Flutterfin ([GitHub](#)), 2025-2026**
 - Comprehensive Jellyfin client made in Flutter/Dart, built for Android, Linux and Web
 - Supports subtitles, multiple video/audio tracks, downloads, search, admin dashboard, user customization, multiple servers
 - **rembg-flutter/rembg-gui:** Background removal apps for images in both Flutter and GTK
- **Information Systems/Technology**
 - **Home Server, 2024-2025**
 - Repurposed a Dell laptop as a home server for personal use
 - Various use of Docker, sometimes up to 15 containers, with services like: Jellyfin, Vaultwarden, and Pi-Hole
 - Implemented encrypted backups that were successfully restored following 2 hardware failures
 - Configured SSH rules, firewall rules (ufw), backups, monitoring (Uptime Kuma and Gotify), and automatic updates

- **Virtual Private Server, 2025-Present**
 - Currently managing a VPS on IONOS's platform for \$6/month, to host small-load services publicly
 - Configured SSH rules, Monitoring (Uptime Kuma), Reverse Proxying (Nginx Proxy Manager + Cloudflare)
- **Public Game Site, 2024-Present**
 - Hosted/managed a public site incorporating browser games, interactive services, and external features
 - Gained organic site traffic through Google and marketing through TikTok
 - Built by connecting Google Sites, Netlify/Github Pages, Cloudflare, and Docker on a VPS together in one project
 - Built a custom Docker image from upstream GitHub source to host a network service locally for the site when it broke down
 - Involved user feedback, updates, service migration, troubleshooting

EDUCATION

- **Henry Wise Wood High School, Calgary, Alberta**
High school diploma, Expected to graduate in 2029
